

INVESTOR DECK · OCTOBER 2026

TITANOS

An operating system that turns public records into work and money for businesses.

Kyle Deligny, founder. Sole trader, Brisbane, Queensland.

THE PROBLEM

Businesses leave money on the table they can't see

- Government contracts are awarded every day. The tradie down the road never hears who won or who now needs a subbie.
- Privacy and email rules keep changing. Small and mid-size businesses can't tell where they stand.
- The answers sit in public records: contract awards, company registers, DNS, filed accounts. Nobody joins them up for the people who need them.

WHAT TITANOS DOES

Public records in. Work and money out.

- **Data feeds:** live government contract awards (Australia plus open-contracting feeds worldwide), company registers, public DNS, filed accounts.
- **Factories:** evidence-backed dossiers and submission-ready packs, every figure sourced and dated.
- **AI agents on rails:** they hunt, check and draft; a human approves anything that goes out.
- **Delivered as products** a business can buy online in two clicks.

THE PRODUCTS

103 productised offers, an offer for every business

Subbie Finder: who just won the contract near you	AU\$99/mo
TITANOS Monitor: email and compliance watch	AU\$149/mo
Job Flow for tradies: new work before it's advertised	AU\$249/mo
Lead lists from verified business data	from AU\$497
Privacy Act + Essential Eight, done with you	AU\$5,997
AI partner retainers	AU\$1,500 to 5,000/mo
Enterprise and channel partners (IT providers, brokers, franchises)	from AU\$49,997/yr

30 offers live with online checkout today; 73 launching as each data source is verified.

WHY IT'S DIFFERENT

Assets an ordinary agency doesn't have

- A database of millions of Australian businesses with domain, industry and technology.
- Keyless government contract feeds: supplier, suburb, postcode and value for every award.
- A free open-source email-security grader (SpoofGuard) that powers the free check.
- A dossier factory and a submission-pack factory that clone per client: a new customer is one line of configuration.

BUILT BY ONE PERSON

The engineering is the proof

152,293

lines of tested Python, main repository

5,760

automated tests passing

~39

engineer-years of work by the Basic COCOMO estimate

US\$30

a month of AI subscription to build it (Kyle's figure)

1,078 commits in the main repository since late August 2026, each one through an automated test gate before it ships.

WHERE IT STANDS

Honest status, 5 October 2026

- Live: titanos.tech with published prices and online checkout on 30 offers.
- Outreach running: evidence-based emails to Australian businesses, reply tracking, call lists ranked by deal value.
- Applications in review: GitHub Secure Open Source Fund, NLnet NGI Zero.
- **Revenue: none yet.** The first sale is the next milestone.

THE ASK

Fuel for distribution, not for building

- The product exists. Capital buys reach: more outreach, more data, faster verification of the 73 offers in the queue.
- Minority stake only; the founder keeps direction and control.
- TITANOS will incorporate as a company when an investor is ready to proceed. Any terms go to a lawyer and an accountant first.

Twenty minutes? See the engine run.
